## Blind Iranian's career a story of success

At the age of sixteen I just couldn't adding machine with a Braille keyboard and panel. spoilt child slatus were not what I wanted. What I wanted was to come to terms with myself and my condition," says Keyvan Dahesch.

Dahesch was born and brought up in Iran. He was blind from birth and doubly handicapped by the fact that twenty years ago there was not a singla school for the blind In his native coun-

So in Septomber 1958, feeling that his Intellectual faculties would atrophy unless something was done, Dahesch decided, et tha age of sixteen, to leave Teheran and apply for o pisce at Stuttgart colloge for the blind.

His parents gave him what assistance ond encouragement thay could, but Dahesch had to learn German himself, and then Braille. Since when, despite the twofold drawback of blindness and the foreign language, his story has been one

He is currently employed as public relations officer to the Hesse state social accurity board in Frankfurt, where he writes press releases on war pensions, on compensation for victims of violence and on facilities at old people's homes.

At the office he has a card index file of names and addresses which he personaly keeps up to dote with the sid of o apecial Brailte device. He olso has a shorthand machine for the blind and an

Every morning a female collaague raads him the latest newspapar reports, especially lhose portinent to his own work. Dahesch reckons it is absolutely essential to keep abreast of current sffairs; in his job as a PRO he must make sure he stays well-informed.

As soon as the decision to issue a press release is taken. Daheseh pores over the relevant legal provisions in his Braille version of the civil code and other tomes.

He than phones around the various departments to glean such extra information as he may need, Finally, he dictates the press releaso that is sent out to agencies, newspapers, radio and TV.

It is an unusual job for someone who has been blind from birth. The blind mostly work as telephonists, masseurs, brushmakera and basket-weavers.

Kcyvan Dahesch is ambitlous and a hard worker. He had to be to get where he is. After graduating from the college for the blind he took up an appointment as masseur at Frankfurt University Hospital In April 1960.

He went on to work in a number of hospitsIs in the vicinity, but did not find the work fully satisfying. So he was delighted when the Trades Union Confederation sponsored him as a mature student at Frankfurt Labour College.

In the winter aemester of 1971/72

Mr Keyvan Dahsach in his Frenkfurt office

there was a strike of students at Frank- ferably those with a vein of social confurt University. Fellow-students tried to dissuade him from sitting his oxams, but Dahesch went ahead regardless.

"The other students dismissed me as a right-winger," he says, but Dahesch Is both a Social Democrat and a momber of OTV, the public service and transport workers' union.

He graduated as eleventh in a class of forty and was appointed to a senior civil service grade at the social security board. Since 4 July 1976 he has been a fullyfledged civil servant, having previously become a naturalised German citizen.

"I am blind all right," Daliesch concedes, "but that is my only disability. In all other respects I hold down my job by virtue of qualifications and on the atrength of results."

In his spare timo he reads novels, pre-

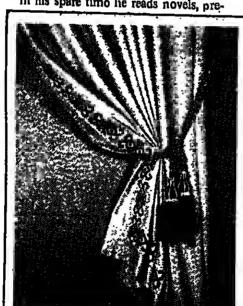

cism, such as Hana Fallada's Wer einne aus dem Blechnapf frisst and Dicker David Copperfield.

To a certain extent he feels he ha much in common with the heroes d both novels. Willi Kufalt and David Copperfield. "Both have consoled and encouraged me." he admits

Dahesch, now aged 35, is a marriel man. His wife is a German girl. Ik finds no lack of things to do in his lisure time. "When people realise that I am no tyro at shortband they soon as mo to lend a hand," he says.

He is Hon. Sec. at his local branche of the Social Democratic Party, the tak union and the Workers' Welfare Asse

of the Comocon executive committee. sought a convenient opportunity of paving the way to better contacts. He aubmitted an official Comecon bid

to negotiate comprehensive trade and cooperation terms with the EEC at a time when his opposite number as chairman of the European Community's Council of Ministers was Luxembourg Premier Gaston Thorn, a man who could be regarded as reasonably neutral.

This, then, was the first time in nearly two decades that Comecon officially acknowledged the existence of its Western European counterpart.

Long-term sgreements between indlvidual Western European countries and East bloc governments were not, for the most part, affected to any great extent by the transfer to Brussels of responsibillty for negotating trade sgreements on the Nine's behalf.

One auch sgreement is the deal between Moscow and Bonn by the terms of which the Soviet Union supplies this country with natural gas in return for pipeline deliveries.

December 1974 - even though East European governments might like to feel they do fill the bill.

With the transfer of responsibility to Brussels the European Commission was able to aupervise the outcome of cooperation talks between EEC and East European countries and ensure that EEC trade policy regulations are enforced.

Annual quotas of imports from Comocon countries are ahared between the Nine in accordance with EEC regulations and announced by the European Commission as sson as the Common Market countries have agreed on the de-

The EEC, it must be added, has retained the most-favoured nation status accorded to East bloc countries.

Closer cooperation between the EEC and Comecon will entail a number of organisational points. Comecon does not, as yet, possess aupranational bodies in the sense that the Common Market docs, and there are no signs that Comecon intends to establish any such authontles.

Integration within Comecon is aimed mainly at intensifying planning coordination between member-countries and at financing a number of large-scale joint projects, especially in respect of raw ma-

Nearly all East bloc countries are, for Instance, engaged in halping to exploit Soviet petroleum and natural gas and supplying pipelines for transport pur-

Comecon bodies cannot be compared with their Common Market counterparts because, for one, they are not entitled to reach decisions binding on all membercountries.

They are merely authorised to make recommendations which individual countries have not always followed in

The GDR and Bulgaria have invarisbly adhered strictly to the letter of Comecon resolutions, whereas Rumania, for Instance, has only acted on recommendations that Bucharest considers

considerable development potential. The set up supranational institutions, accord- cffectively negotiate on the other side. Soviet Union, for Instance, may be one of the most poorly-developed Comecon countries in GNP terms, but by virtue of its site at accounts for 65 per cent of combined Comocon GNP.

counts for aeventy per cent of Comecon's population. So it retains praponderance within Comecon, whereas the Common Market now consists of four larger and five amaller member-coun-

But agreements of this kind are no in development level between the indi-

Peter Altmeier dead

Herr Pater Attmeier, the Rhineland-Pfelz Premier from 1947 to 1969, died on 28 August eged 79. He was the man who in 1948 invited tha heads of the other Garmen Länder to a meating at Koblanz at which the foundations for the future Fadoral Republic of Garmany were leid. Harr Attmeier, who was born in Saerbrücken on 12 August 1899, was elected to the Koblenz City Council as the youngest Centre Party mamber in 1929. During the Third Raich, Herr Attmeier, e Cetholic, was strongty opposed to the National Socielists. It was only by chance that he managed to avoid being arrested after the attempt on Hitler's lite on 20 July 1944. After the war he wee In charge of the Montebeur region and leter in Meinz ha led coalitions, letterly with the FDP, aven whan he controlled en ebsolute majority in the state Assembly. The CDU politicien was a bitter opponent of Frence's plen to Europeenisa the Seer, es wall es a raspacted spokasmen for French-Germen reconcilietion. Herr Altmeier earnad univarsal preise for the work his government did on behelf of the people in the leen yaers efter 1945. He organised the food supply, campaignad egainst plens to da-industrielise the area, and made sure that the Rhinsland-Pfeiz forestry eraes ware not lost in raperations payments.

within the East bloc trade association.

The Comecon economic set-up represents a further obstacle to the emergence of an East bloc EEC. Each country retains its own price system and there is no effectiva common denominstor of East bloc currencies.

As a result currencles are still not freely convertible within the East bloc. The GDR, Poland and Czechoslovakia have made a modest start by abolishing visa requirements for their respective cittzens, but the upshot was an uncontrollable ruah from one country to another to buy up less expensive commodities.

In next to no time the authorities were left with no option but to reintroduce compulaory exchange regulations at their respective borders. In addition to an executive committee

ing to Nikolal Faddeyev, Comecon's For the time being the two organisasecretary-ganeral.

balances within Comecon and to finance sion with accomplished ease. . It is also due to say that differences joint investments.

vidual Common Market countries ere retical debates practical integration bemuch less substantial than is the case tween Comecon member-countries has hardly progressed beyond their respective foreign trade ties.

To this day Comecon does not even possess multilateral foreign trade accounting facilities. Serious consideration has evidently not been given to the provision of a freely convertible rouble for all either. Small wonder; nearly all the preconditions have yet to obtain.

So It is easy to ace why the European Community's response to the 16 February 1976 Comecon offer was relatively cool. Little more than a "working relationship" could be considered for the time being, the chairman of the EEC Council of Ministers Informed his Comecon opposite number.

Sinca Comecon lacks supranational institutions in the aense that they already exist in Brussels and alsewhere withreconcilable with the national interest. Comecon has a number of constituent in the EEC there is no one with whom The Comecon countries atill have bodies, but there are no plans as yet to the EEC officials in Brussels can

# Hanns Martin Schleyer, the man who heads two employer groups at the same time

anns Martin Schleyer, 62, is president of this country's two main ment that the two associations now dination between the BDI and the BDA is not yet ideal but nonatheless far between the BDI and the BDA is not yet ideal but nonatheless far between the BDI and the BDA is not yet ideal but nonatheless far between the BDI and the BDA is not yet ideal but nonatheless far between the BDI and the BDA is not yet ideal but nonatheless far between the BDI and the BDA is not yet ideal but nonatheless far between the BDI and the BDA is not yet ideal but nonatheless far between the BDI and the BDA is not yet ideal but nonatheless far between the BDI and the BDA is not yet ideal but nonatheless far between the BDI and the BDA is not yet ideal but nonatheless far between the BDI and the BDA is not yet ideal but nonatheless far between the BDI and the BDA is not yet ideal but nonatheless far between the BDI and the BDI employers' associationa: tha Federal union of German Industry (BDI) and the Federal Association of Germen Employera' Associationa (BDA).

This is e typical day in his working life: 7.30: his plane takes off from Stuttgart airport; 8.30: arrival in Cologne-Wahn; 9.00: internal BDA meating in Cologne; 10.00; BDI hesd of departmenta meeting: 13.45: newspaper interviaw for the BDA: 14.30: meating with American busineasmen at the BDI; 19.30: political discussions in Bonn.

Sometimas ha even rushes back to Stuttgart in the evenings for e conference or some other meeting held by his "own" company, the Dalmler-Benz AG. Herr Schleyer is ironleally referred to in the Mercedes head offices as "our board niember released for association duties,"

ilerr Schleyer is the first double preaident in the history of modern German industrial essociations.

In the nineteen fifties, Hennaun Reusch, the almost legendary former boss of the Oberhausen Gutehoffnungs-Ilutte, once ssid: "Let us wait until otd Gerhord Erdinann has retired (Erdmann was the BDA chief executive) and then we can merge the BDI end the BDA." But this never came about.

Rivaines and ottempts to co-ordinate activities alternated; successful agreementa in political questions were foilowed by discord.

It was simply impossible to achieve s stable and harmonious relationship between the two sssociations who were nieant to cover the economic field for industry end the social and political field for the whole economy.

During the Adenauer era, the BD1 tended to dominata. Its influence was decisive. The BDA had to conduct wage negotistions - s difficult task which they could only make the best of.

The political and economic climate changed when Adenauer's Chancellorship came to an end. Now it was the BDi's turn to take a back acat.

Under Hana Günter Sohl's presidency they regained lost ground, but did not regain their former ascendancy.

Sohl, an expert in the field of cooperation and mergers, finally brought up the old idea of closer ties between tha BDI and the BDA.

A merger of the two associations was, however, out of the question because this would have meant that the non-industrial BDA would have been without a central organisation.

Sohl hit upon a possible solution. Hanna Martin Schleyer, president of the BDA, could become double-president of both associations.

Sohl's coup was successful - both asacciations ogreed eventualty. Since the beginning of the year, Schleyer has been president of the BDA and the BDi and in all probability he will continue to hold both offices until 1980. Herr Schieyer will be 65 on 1 May 1980.

"When the time comes, I'm going to resign. Others can carry the burden," says the man from Stuttgart, neatly avoiding committing himself to an answer as to whether the axperiment is ilkely to continue.

Hla own judgement on the experiment so fer: "It is a positive developsocial questions."

it is certainly true that there were often enough demarcation difficulties between the two organisations in the paat - especially when it came to discussions and negotiationa with the unions, who inslated that the employers should talk not only about wages but also about prices and investments.

Heinz Oscar Vetter, chairman of the German Federation of Uniona (DGB), conceded that, on the whole, the unions were in favour of this strangement.

However, since the associations have complained to the Federal Constitutionsl Court shout certain sections of the co-determination law, the DGB chairnish has changed his tune somewhat.

He now says that the union between the two organisations ought to be looked into more closely. Herr Vetter ia clearly wondering

whether this complaint would have reached the Karlsruhe court in time if it had not been for Herr Schleyer's importance as an integrating factor. Thia consideration explains Herr Vet-

ter's reservations. From employers' circles we licar that the double presidency enables the employers' sssociations to act more rapidly and effectively in diffi-

The skirmishings on the constitutional complaint are certainly one example ot this. Schleyer still stresses that co-oris not yet ideal but nonatheless far better than it was before.

Blg businessmen and members of the executiva would not wholly agree with Herr Schieyer's judgement bere

Thera is still a lot of room for improvement in the matter of fixing datas, deciding who la to be responsible for what co-ordinating statements and working out mutual obligations.

And the main problem is that Herr Schleyer simly has to much work to do. He is expected to do two president's jobs at once.

A BDI official said: "We are trying to change this. We are trying to persuada former president Sohl to take over some of the work and we also call upon voicepresident Kurt Hsnsen (Bayer Leverkusen)." Hansen is virtually unknown to the general public ss vice-president of The economic and social stance of the

united lesdership is, however, of far greater importance than the tactical aucstion of the distribution of responaibilities. Schleyer is well known to the general

# Professor Spiros Simitis to take over as Bonn's new data protection director

**Professor Spiros Simitis** 

The new head of dats proteotion in does not yet know of his good fortune. Professor Simitis' early departura from data protection in Hesse and Professor of Work and Social Law at the university of Frankfurt.

While his appointment was described as "a certainty" in Bonn, Horr Simitis, a naturalised German, born in Greece, was holidaying in his Heilenlo homeland with his wife, a "real" German. He had previously been on holiday in israei.

Before the professor's appointment as

this country's top data protection officisl can be announced publicly, the Federal Cabinet will have to make an official decision aftar the aummer holidays. It will also have to regulate the problem of Professor Simitis' early departura from

his position in Hesse. The federal data protection service dlrector is completely independent. He is attached to the Ministry of the Interior and bas the rank of a ministerial direc-

The Federal Data Protection Law was passed in January 1977. According to this law, the data protection director was meant to take up office on 1 July 1977, but there has been some delay.

There has been a data protection taw in Hesse since 1970. Apart from Rhineland-Pfalz, Hesse la the only State with a dats protection committee in its Landisg. (State Assembly) and its administration.

Since 1971 the State has had a data. March every year.

The first dots protection director in Hesse was Will Birkelbach the tongserving SPD MP ond one-time secretary of state to former Premier Georg August

He was the first data protection direc-tor in the world. He was followed by Prof. Sunitis in 1975. Prof. Similtis is not a member of any political party.

Those who know the Greek-German professor well describe him as "the most courteous man I know, and also the firm

est when it comes to stating his poid of view."

- Prof. Simitis went to school in Alhes and then studied law at the university Marburg. He then took up professe ships, first at the university of Franklut

He is always very open-minded discussion and ready to listen to sugge tions from his fellow worksrs. One if his students described him as "Far mot charming than most Garmans." Her evar, the Hessian and now federal de protection director is "as hard as my when his principles, and justice, are p volved."

According to Hessian law, every of zen can appeal to the data protection rector if he believes that his rights he been infringed as result of lilegal use computerised information.

Professor Simitis has been reientles in his insistence that the letter of the law be observed. Since assuming office. protection director, who is required to he has revealed a number of abuses it this field.

A number of official bodies infringed tha data secrecy requirements as a result of careless use of computers and det processing.

In the case of private data sinners, lb Hesslan data protection director has the official powers to prosecute, but he point out the abuses, and Prof. Simile has done ao several times. There immediate public protest in each and the offenders were quick to put stop to the abuses. Albert Bechthold

(Kieler Nachrichien, 26 August 1978)

FILMS

# New documentary about Hitler is dangerously one-sided

Thousands of people in the Federat Republic of Germany are making up for what they missed in thair school history lessons by going to the ciname to see a new film about Hitlar which came out a few weeks ago. Newspapers, radio and TV, are davoting more and more space and tima to the years of the Third Raich. Added to this, e woman from the provinces has recently hit the headlines by smuggling her husband, Harbert Kapplar, Hitlar's former Gestapo chief in Rome, out of an Italian military hospital back to this country. The snsuling uproar caused a meeting between the Italian and Garmsn Isadars of state to be called off. is the past perhaps not gulte as "over and dons with" es wa would wish to ballave?

Wa have a new Hitler film. But this does not mean we have a new picture of Hitler. Evar since the premiera of Joachim C. Fest's and Christian Herrendoerfer's lengthy "Hitler - A Carreer" some commentators have been writing such effusive reviews that it is enough to make the public's mouth

They say that this is a film the like of which no one has dared to produce aince 1945.

Whoever writes this kind of thing obviously cannot have seen Fest'a television film of April 1969, or else he has not read his 1,200-page blography of Hitler very sttentivety.

Or else he has been tsken in lock, stock and barrel by the distributor's publicity: "Wa have produced the standard film work on Hitler," in the words of the Munich producer Wemer Rieb.

The film is basically no more than a big screen version of the eight-yesr-old German television version (which Die Zeit described at the tima as "one of German television's finest hours.")

It has been decked out with a few recently discovered or acquired colour films (including Eva Braun's Obersalzberg idyll -1 rare shots from the early dsys of the National Socialist movement and various other bits and pieces of private film.

It is a talking picture psychogram of the brilliant demsgogua - the old, old story, with, in some places, exactly the same text as the television version.

The only noticeable difference is the big screen and the stereophonic effects. The production firm has spent e lot of monay gatting old and worn-out copies into acreenworthy shape sgain.

We have never seen the Reichstag burning so fiercely before or the dark interior of the Potsdam Garnisonakirche lit up so wall.

With no TV cutting atudio to fear, Fest has got all the time and space in the world to show the jubilation of the messes and dwell on Hitler's speeches. For minutes on end we are voyeuristic

witnesses of a half pseudo religious, half-erotic union between tha mis-leader and the mis-led, the seducer end the seduced, the rapturous devotion of a mass ready to do anything for the Führer women and girls in particular (posters in the Third Reich telling young girls: You, too, balong to the Führer.")

Hitier's contemporaries will relive good oid times as they watch Leni Riefensiahl's intoxication, ecsistic films of party meetings: high on Hitler. (Leni Riefenstahl's name is not, by the way, mentioned in the film's credits.)

fect he had, explain how it came about that many were fascinated by him, and thus make us, today, immuna to that kind of reaction."

This is the intention. What ha in fact achievas is fascination by fascinstion. Direction, cutting and tone all help to heighten the affect of big Nazi occaaions which were themselves carefully stage-managed. When Hitler marches clone along the

Munich Königsplstz to tha temple built

in honour of "The Dead of the Move-

ment", we hear tha clatter of his boots on the marble tiles. And while we watch s close up of Hitler getting ersatz satisfaction by taking, "a bath among tha crowd," a phallus-like Zeppelin looms up on the

screen. This is the kind of nonsense that

defeats the purpose of tha film. This is a dangerous film. Not because of tha accompsnying commentary, which is too short and in any event above most viewers' heads, but because of its diffuseness.

The phenomenon of Hitler, his undisputed talents, his acting, his mesmerising effect) on the masses, the uninhibitedly uncritical admiration for his personality and his work dominate the film to such an extent that words auch ss totalitarian state, concentration camp, SS, war, death and destruction ore simply submerged.

Tha crimes (though not all) are named, but they leave us somehow cold. In his oversion to a moralising view of history, the author Fest has committed a serious error of omission.

The director had the idea of breaking up the "Strength through Joy" scenes showing the everyday life of s people apparently happy under a dictatorship by flashes showing those Germans who are no longer there: Einstein, Thomas Mann, Max Reinhard, Kortner, Tauber, Lu-

But the mention of these names is not enough: we find out nothing about sll the inhumanity, philistinism, the miseries of emigration and parsonal des-

And when we hear in the commen tary that these refugees left the country to its provincialism, this even sounds like - though certainly was not intended to be - a reproach.

True, we do see pictures of the first concentration camps in 1933, but we do not find out who, and how many were acnt to them (and there were tens of thousands.)

We are told of rivalries between the SA. SS and the Reichswehr in the summer of 1934, but the aubsequent first political mass murders on German soil. ordered from on high and later declared legal are dismissed in the relatively harmiess phrase that "SS leaders were

There is not a single word of the coldblooded murders of generals Schleicher and Bradow, or the staff of vicechancellor von Papen, or the murder of Hitlar's one-time companion in arms Gregor Strasser and many other opponents of the regime.

We get brief glimpses of burning books, but none of burning aynagogues. We see a mass execution in the East, partiff shape

Fest defends his film by saying: "One ahould certainly show the fsscinating ef-

The film is intended to illustrate the themes which Fest stresses in his fine lography (our reservations about the film do not blind us to the excellence of

• that this career, still incomprehensible to us, of the son of e provincial Austrian official, a painter, post-card designer and corporal who became lord over Europe and took on the whole world, was only possibla because of "a unique combinetion of individual and general preconditions, by tho mysterious and Indecipherable correspondence between this man and his time."

• that he proclaimed himself the re-

deemer of his race and of humanity.

• that he pursued his dream unerringly, the dream of a Eurasian empire ruled by Germans, the extermination of the Jewish race and other allegedly inferior races and the breeding of s "naw man", with a conquered Russisn ss Gsrden of Eden.

Theodor Schieder, doyen of historians in this country, credited the outsider Fest with being the first historian to develop the categories within which the man Hitler could be understood as a historical phenomenon.

Golo Mann was severe in his criticism, but nonetheless conceded that Fest has written "the definitive work on this repulsive subject for the next fifteen or twenty years." Has he also produced

Fest's weakness as a historian is much more evident in the film than in his

Hermann Graml of the Munich Institute of Contemporary History defines this weakness as "amazing unsureness of judgement about all situations, factors and people who do not belong to the narrow circle sround Hitler."

Fest clesrly has not taken sufficient account of the fact that this is a mass product that can resch millions of people with its optical and acoustic effects, people who, despite the fact that over 500,000 copies were printed, will not have read his world bestseller and its re-

And most of these peopla will be of the younger generation, whose knowledge of Hitler and his time consists

(Photol Sven Simon)

only of the completely inadequate history teaching they have had et school.

In this film the "situations, factors and people" of which Graml speaks are criminally ignored.

Naive filmgoers will come away with the impression that the man who ruled the Third Reich for twelve years was a

He and he alone solved the unemploymant problem, built the eutobahns. restorad "authority, order, purpose and self-confidence" and removed the dishonour of the Treaty of Versailles.

And finally he and he elone waged war with half the world for six years. Hitler's paladins Goering, Goebbels, Himmler, Heydrich and Speer come across as merely marginal figures when they appear et all.

Where is financial adviser Schacht who financed the Nazi economic boom? Where is Todt, who organized the building of the autobahns?

Whera is Speer, who stage-managed

the whole Nazi cult and stepped up erms production during the war? Where are the Wilhelmstrasse diplomats who prepared Hitler's foreign policy couns? Where are tha bankers, Industrialists and estate owners who so gladly

supported Hitler's arms drive and filled the coffers of his party? Where ere the judges and officials without whose coliaboration the totalitarism state would not have been able to

Is there any mention of the fact that the megalomania end bloodthirstiness of the beer cellar demagogues ia part of a tradition that goes back to the Frankfurt Paulskirche?

Where sre we told that practicelly every one of Hitler's radical ideas world government, racial resettlement and racial selection - were titted from

others who had these ideas before him? The passages in the film dealing with foreign policy and the war are basically mere interspersions, but they contain unacceptable simplificationa.

The Anschluss (annexation) of Austria presented as e decision taken out of sheer boredom, the Sudeten crisis of 1938 remains completely incomprehens-

As the war gets nearer, the chronology of the film gets more confused and the historical accuracy leaves more to be de-

Fest claims that he in this film wanted to convey insights and impressions in "as sober, rational and objective a manner as possible."

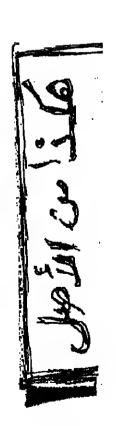

But there is a difference between presenting debatable, but interesting theses in s 1200-page book and relying on citizens' discrimination as one re-enacts and celebrates the Third Reich's theatre of terror in all its frightful beauty.

Such e celebration is doubly dangerous in an age in which Kariheinz Bohrer has written (in the Frankfurter Allgemeine Zeitung co-edited by Fest) that Hitler is the "hero of the conservative seventies."

... Whoever lets Hitler on to the acreen in this form, explaining his psyche, but not his programme and not his movement, not the social, historical and poiltical preconditions of his success, not the predisposition and responsibility of virtually the entire people, whoever does this, even in good will, is guilty of exculpatory myth and legend creating. He will have to accept the judgement

of a Polish historian who says that the "Hitler wave" is nothing, but the "expression of a dubious form of nostalgia or the pure commercialisation of a period of history still not fully researched." Karl-Heinz Janssen

of the Mary 4 and 1 (Die Zeit, & July 1977)

#### **ECONOMICS**

# Oil price rises have brought unexpected benefits to industry

he people of this country are still bring about this redirection of the ecoconvinced that the oil price rise of three and a half years ago was e curse,: .

They remember only too well the auadrupling of crude oll prices, the ban on Sunday driving, the world economic recession, the threats of an oil boycott end the soaring petrol and heating oil

The crises mood of thase times has left scars which will take some time to

in view of this, we can hardly expect political and industrial leaders to elart lalking ebout the "blessings" of the oll price rise — even though it is probably truo to say that this country hes almost gained more than it has lost as a result of the oll-producing nations' "extor-

The Opec cartel has caused an enormous extra reduction of purchasing power in this country of 40 thousand million merks. All but five thousand million marks of this have since flowed back into this country.

And this sum would have been skinned off in any event as a result of normel price rises. Since 1975 debit and credit of trade and services have been balanced out evenly.

These cober figures ere evidence af e profound economic change which has so far been to the benefit of this country's strong economy.

Anger at the shelks the Shah and socialist potentates such as Gaddhafi forcing us to pay extortionate prices for pc-Irol and haating oil is justified.

But ten of the thirteen Opec counlries make up for this by buying German products - mainly industrial plant. machines, vehicles and electronic

When Iran buys products worth milllons of marks from Krupp, this may well anger car-drivers and people with oil-fired central heating who are indirectty footing the bill.

But on the other hand, they are also beloing to secure jobs in a company which is by no mesna stable.

The 800 million marks which Kuwait naid industrialist Herbert Quandt for his fourteen per cant of Dalmler shares have also been paid for out of German citizens' pockets in the form of increased oil prices.

These examples illustrate the huge shift of purchasing power away from the industrial nations to the oil-producing nations. The latter achieved e surplus of t30 thousand million dollars, only a very small proportion of which came from the weak underdeveloped countries.

The economic advantage of this structural change is that it reduces the excessive concentration on consumer goode towards investment goods.

Exports worth 15 thousand million merks went to the Opeo states in 1976. This is 25 per cent more investment goods than the average in the overall export totat.

As our export industry depends more on the sale of "intatligent goods" than mass consumer products, the creaming off of German purchasing power by the Onec statea is an advantage. Experts agree that the German government alone would not have been in a position to Tha U.S. Treasury Secretary Michael

nomy on such e scale."

This country has not only mastered the changes in the world economic situation resulting from the prices diktat, It has even maneged to take advantage of and make a profit out of them.

tf we look at aur balance of payments we see that in 1972, before the oll crisis, we had e deficit of two thousand million marks in our trade with the oil-produc-

On the other hand, the Opec cartel elates only achieved surpluses of 300 inlillon marks in 1975 and 900 million

The USA, Jepan, France Britain and Italy oil have much higher deficits in their trade with these countries. Auather pasitive aspect of the oil price increaso betler export chancee in other coun-

German oil-usera will not be picased to hear this, but basically they are financing a large part of the successful German export drive,

Germen exports to Opec countries have increased five and e helf times

This increase is far greater than that of any of its vampetitors. In 1976, exports to Opcc countries represented e gaod 8 per cent of total exports. This is much more than our exports to the USA or lo ell the East bloc countries put to-

Bchind these well-balanced figures are hundreds of thousands of commercial and industrial initiatives whilch, when examined, reveal the nature of the struc-

Week after week, thousands of German businessmen go off to these newly nch states trying to make their fortunes as in the days of the Californis gold

Former Finance Minister Karl Schiller edvises the Saudi Arabian government on economic and monetary policy, to neme just one prominent example of the close economic ties eith this coun-

A few examples will suffice to show what an important effect the oil shock had on the delivery petterns of German

The highly profiteble Dalmier Benz AG was certainly not pleased ebout the Kuwalt government buying shares, but on the other hand it would not be as successful as 'It ie without the large number of lorry exports to certain Arab

'A number of large construction cornpanies would be on the verge of bankruptcy if it were not for building contracts in Saudi Arabia, Nigeria or Iran.

The Philipp Holzmann AG has gained the reputation of being "court cantractor to the kingdom of Seudl Ara-The Kraftwerk-Union, one of the top

international atamic power station constructors, would be in the red if it were nat for mejor contracts in Iran. Many German industrialists can only

dream of injections of capital. The Iran government's shares in Krupp and the Kuwait government's In Deimler are not

Genuan industry has an number of built-in obstacles to prevent this kind of deal. Shareholders' meetings of the public companies Mannesmann and Beyer wrote in special clauses to discourage the purchase of large numbers of their

The governments and rich men of the Orient can now purchase German shares for their portfolios, but the less successful Gemian companies will wait in valn for investments such as those made by Saudi Arabia or Kuwait. The USA is more popular with the Opec countries

Total German capital linports from the oil countries are not very high, even though they do increase the benefits German Industry has already gaines from the increase in the price of oil.

From 1974 to 1976, about 6.6 thos eand million marks of capital came is the country. This represented only 4 pa centidf total investable money. The iki ettracted 30 thousand million dollar from Saudi Arabia alona.

. This; figure of 6.6 thousand mills DM dies not include ahort-term canin Inflow, nor the thousands of million marks which came in via third country The oil price cartel has not only sie hiflcantly changed the atructure of a German economy, it has also bround about a new trend. It has forced ut !

start saving energy.

Hence the inevitable shift of layer. ment concentration to the highly costroversial atomic power stations for m emple - as well es the development alternative forms of energy.

At any rate, this country, essentiale a being forced into a faster rate of an nomic change, if it is to keep upling industrial nations' acramble for oil al-

Most of our competitors have a more bad than good out of the & nations' price diktat. There has been a shift of the economic balance to it disadvantaga of the developing nation end the weaker industrial nations.

Tha USA and the Soviet Union as of producing nations themselves have is creesed their influence - their all poduction also benefits from increased a

The new end the old rich nation help the weaker ones with enormos credits, but it is increasingly difficult keep them above water.

The industrial nations will have t give the developing nations more his one way or another, if they want to keep crisis points under some kind of control if we look at the effect of the oil classical example of the theory liv generous development, ald pays for the ndustrial nations as well.

The price diktat of the 13. Opt netions, who bafore 1974 were have nota, bas forced the Germane lo reduce consumption, Or would German istpayers have been prepared to fork of evan a half of the thousands of million which these nations have now extent from them? Dieter Balkhausen

#### **■** ECONOMICS II

No. 803 - 4 September 1977

# Long-term boost in public spending needed, says DIW

n the second quarter of this year economic recovery ground to a halt, and the prospects of a further upswing with sufficient pace to maintain its momentum are poor to non-existent.

This alarming conclusion is reached by the DIW economic research institute, Barlin, in its latest weekly survey. The report also notes that ecanomic recovery is a must if unemployment is to be re-

The Berlin economists call on the gavernment to undertake a fresh attempt to revamp the economy on a more permanent basis and thereby help to improve the position on the lebour market.

A programme of public spending must be inaugurated and there must be no hesitation to invest and boost demand in sectors where public investment is needed.

What the Institute has in mind, however, is not a special investment exercise. The effects of programmes of this kind are usually offset by cuts in ragular budgetary spending. What is called for is a ong-term boast in public spending as e

Thus the report sounde a warning nota in respect of the Bonn government's long-term investment programe, the first contracts for which are currently being placed.

It would be dangerous, the Berlin economists advise, to rely on the pump-

#### Continued from page 8

bouring countries is so unstable that their governments cannot be expected to react perfectly rationally.

Some people have got the Idea into their heads that Germany Is not playing its part in contributing to world economic recovery end they will not be persuaded otherwise.

The Faderal government certainly does not - even involuntarily - wish to support protectionista ebroad. The German economy is too dependent on exports. On the other hand, German exportera need to be given the same conditions as those in other countries if they are to take their chence."

This, is the dilemma the government is now facing. It would certainly have been far easler if it had not aroused false hopes among other countries.

H.-J. Mahnke (Die Welt, 24 August 1977)

ventures. Their annual effect is too small to offset cuts in public expenditure as a

Consumer demand has failed signally to respond to the cash inflow arising from increases in government children's allowances and investment incentives, so the institute has no great hopes of demand being boosted as a result of any temporary cuts in income tax that may be under consideration.

Even If cuts in personal taxation ere speed at which they can be undertaken," the report notes, "the emphasia must nonetheless be on expending public ex-

"If sneed is required it might be better to hire additional public service employees than to etep up invesiment

Ae for the prospects of a self-support-ing upewing last winter, the Berlin economisls reckon the government let the opportunity slip by keeping its slights firmly set on the target of economia

There was a juncture, they cleim, at which the economic Indicators augured well for atlempts to continue end Intensify the upswing.

Both demand end production had taken a marked turn far the better. Sales prospects looked good, with exports holding forth the promised of steady expansion and domestic demand about to be atimulated by earnings-linked savings certificates maturing.

The businese outlook likewise looked better than it had done for some time. with profits up substantially, factories working et an increasing percentage of capecity and few financial problems with cash available and Interest rates

In the circumstances industrial and commercial investors might reesonably be expected to go ahead and Invest, especially as the employers definitely fared betier than the unions in last year's wage agreements.

Moderation prevailed in the 1976 wage talks round, with the result that management gained the upper hand and the pace of wage cost increases slowed down appreciably.

In retrospect, however, the Berlin institute concludes that: - the recession was so marked and

lengthy that both private investora end consumers have not only felt disinclined to run risks but remained reluctant to do so for longer than had been antici-

- the retarding influence of a merely moderate expansion rate has been uederestimeted in relation to the inflationery risks a swifter rete of expansion en-

Since the authorities failed to appreciate this psychological obstacle to investment and consumption they continued to aim first and foremost at a balanced budget and thus, by and large, pursued restrictive policies.

Reviewing economia indicators, the survey notes that the output growth rate for manufectured goods, which is a sure sian of the overall state of the economy. declined from one and a half per cent in the first quarter of this year to one half per cent in the eecond quarter.

in the second quarter of this year output actually fell in the besic and capitel goods sectors. Only consumer goads and the construction industry took a turn for the better.

Towards the end of last year capital Investment was up substantially in real terms, ao much so lhet the momentum seemed likely to prove self-eustaining.

But invastment has since falled to increase, and domestic manufacturers heve borne the brunt. In the first quarter of this yeer capital goods imports declined in real terms; in the aecond querter lihey increased slightly.

Private consumption proved disappainting in the second quarter. Retail trade turnover increased, but only marglnally, with only cansumer durables faring et all well.

In view of employment prospects, wage Increases resulting in little over per cent more purchasing power and the likelihood of little better to come next time round consumers have tended to exercise restraint.

As a result much less of the cash from savings certificates that have metured has been invested in consumer goods than was anticipated.

(Handelsblatt, 25 August 1977)

## Bundesbank decides to loosen the purse-strings

The decision by the Bundesbank'e Central Benk Council to cut by ten per cent the clearing benks; minimum statutory deposits and to increase certain other quotas has come as no surprise.

Bundesbank president Otmar Emminger announced that something of the eort would be undertaken several weeks ago. Bundesbank bankers have stayed true to their tenet of sticking their necks out as little or possible on the economic front. ...

Were the aconomic prospects e little more promising the Bundesbank might consider anti-cyclical moves in order to nip in the bud inflationary tendencies that mights arise from an upswing.

This would entail slightly scarces money and slightly higher interest rates, but since the economic prospects herdly suggest any imminent need to nip inflation in the bud end the Bundesbank is envious to avoid being cast in the role af scapegoat the Central Bank Council has decided instead to loosen the purse

The measures undertaken are substantial. Otmar Emminger is not a man given to effusuve public statements, but this time he has referred to an "extremely substantial amount totalling thoueands of millions of deutachmarks" and a "fairly massive" cut in stetutory mininum receive deposits.

Dr Emminger now maintains that the Bundesbank has gone as far es it can go and that everything that is feasible in the money supply context has now been done. He is doubtless right.

The ball is now in Bonn;s court, which is not to say that the Bundesbank can do no more; minimum reserves can always be further reduced, but sooner or later they are going to conslitute no more than an alibl. Maybe they heve atready done so.

(Süddeulsche Zeltung, 26 August 1977)

The non-industrial firms who are only

represented in the BDA have other

objections. Schleyer, they say, has stress-

ed the employers' position quite satisfac-

If, however, this should change and

the pendulum swing more in the BDI's

favour, this would upset the balence and

create a gulf belween commerce, craft

industries; agriculture and other associa-

tions on the one hand and the BDA

torily up to now,

#### Continued from page 4

Berg and Sohl, they say, were far more authoritative on economic policy than their successor.

One association executive had a perhaps too simple explanation: the media usually quoted Schleyer as BDA presidant and tended to neglect his BDI rola. But this tendency is clearly a response to the fact that most of Herr Schleyer's energles are concentrated on his BDA

leadership on the other. Schleyer's double presidency was an experiment the result of which no one could predict.

Given the industrial and employers associations role in this country's social order, it is vital that they should have a leaderahip that speaks out clearly on so cial and economic Issues.

sent, a further 200,000 might choose to . In this respect, the double presidency of the BDt and the BDA is a step in the right direction. It would be even better if companies from every branch

could elect a common headership with a broadly basis organisation.

The way is this goal is hard and stony and would thvolve changes in tradition and power. In the words of former BDA presi-

dent Peulsien: "It is easier to get a camel through the eye of a needle than to be the leader of a businessmen's or ganisation." Werner Mühlbrandt

(Die Zeit, 26 August 1977)

#### here is mounting pressure on this country from abroad to boost its economy. At the summit meeting of the main western industrial nationa at the beginning of May, Helmut Schmidt managed to placate his partners, especially those in the United States, who were claiming that the Federal Republic Germany was not making an ade-

quate contribution to world economic He pointed out that German Imports in the past few years have increased at a fester rate than those of other countries. adding that in the future, too, this country would make a significant contribu-

lion to the growth of world trade. He went on to explain that the Federal government had set itself a target of 5 per cent growth in the real gross netio-

It soon becama clear that this declarellon of intent was far too optimistic, and Increasing pressure was put on Bonn to adopt a more expansive economio policy. The Organisation for Economic Cooperation and Development (OECD) and the United Nations World Trade Organisation recommended additional measures to boost the economy.

## Bonn under fire from abroad over trade policies

Blumenthal raised the dollar question and pointed out that as the German economy was not going to reach ifs growth target, the deutschmark needed to ba revalued aginst the dollar.

At this time official sources were predicting an overall economic growth rate of 4.5 per cent. This estimate has now been revised downwards to 3 per cent or slightly more.

Given the serious unemployment situation, the Federal government now wants to lake decisive action. The discussion about possible economic measures at home has led foreign protagonists of expansionist policies to tone down their demands, compared with last

governments' expectations. In the past few days, the United States have had to

readjust their growth predictions down wards. One of the measures being discussed

In this country is an extension of rantee limits for export credits. This certainly not a measure which wou distort competition on the internation markets. "By adopting this measure, the Feder

some, but not all of the way, town giving her exporters the same kind support that other countries give their Yet sections of the German exped industry think that this measure, though it is long overdue, has come wrong time. In some countries has been a hardening of opnion of

Continued on page 7 mail.

An annual economic growth rate of at least six per cent in real terms is a "must" If full employment is to ba re-established by the mid-eightles, the Ifo economic research institute, Munich,

This claim is made in a survey published on 24 August while the Bonn Cabinet was busy considering the details of a proposed forthcoming economic booster package.

The Munich economista base their cialm on the effect of pump-priming measures so far undertaken and anticipata the following trends if the average annual growth rate turns out to be no more than three and a half per cent;

- Unamployment, which stood at 1,050,000 last year, will increase to 22 further 300,000. (News Ruhr Zeitung, 25 August 1977)

#### 6 pc growth rate a 'must' for full employment million by 1985, in other words, it will

more than double to 8.8 per centi-.- Even if half a million foreign workers had their contracts termineted during this period unemployment would still Increase by 600,000 to 1.7 million, or 7.3

This total could be further reduced by a variety of measures: - Vocational training schemes for the

unemployed could account for 100,000.

A tenth year of compulsory ischooling would account for 300,000 more. Were older workers entitled to retire early at sixty father than at 63, as at pre-

- Last but not least, 300,000 women could be withdrawn from circulation and: potential unemployment by the Introduction of a statutory year off work after childbirth.

All told, then, unemployment might be reduced from 1,060,000 last year to about 600,000 by 1985. This would amount to 2.7 per cent or so.

The Ifo economists emphasise that - Shorter working hours (38 instead of none of the messures proposed would 40) could reduce the dole queue by a individually, have the anticipated effect.

This comparative quiet is decentive especially in view of the fact that the economies of the other two main industrial nations beve not lived up to their

# Five Germans shortlisted for the European Spacelab

## Franffurter Allgemeine

I lve scientista aged between 32 and 40 have been shortlisted by the Aerospace Research trastitute, Cologne, as potential astronauts. They will be nominated by this country to man the European Spacelab, which is scheduled to undertake its inaugural mission in 1980.

Research and Technology Minister Hens Matthöfer announced the names of the five, who are all men incidentally, in Bonn on 22 August. He stressed the algorithm algorithm of the experiments they may be called on to supervise on board Spacelab.

This first European venture of its kind, backed by eleven member-countries of Esro, the European Space Research Organisation, will involve materials research (into new alloys, for instance), process engineering and blomedicine in outer space.

The materials laboratory developed as part of this country's contribution to the Spacelab project forms a mere fraction, albeit an exemplary one, of the wide range of experiments that are to be undertaken in the course of the programme.

This country's five would-be astronauts are being nominated as payload experts whose job it will be to supervise

Ernst Messarschmid, 32, married, works at the Desy particle accelerator in Hamburg, on radiation research.

experiments as opposed, asy, to piloting either Spacelab or its US launcher vehicle, the Space Shuttle.

During the Inaugural mission, scheduled for 1980, a total of 77 space experiments will be conducted jointly by Europe and the United States, Esro's contribution will be a further 77 experiments.

Bisst-off will mark the end of Spacelab research and development, which will have cost 1,200 million deutschmarks, with the Bonn Ministry of Research and Technology footing 53 per cent of the bill.

Esro member-countries have between them ahortlisted sixty would-astronauts. A final squad of six will be selected and put forward to Nasa, the US National Aeronautics and Space Administration, at the beginning of next year.

But only one of the six will become the first European astronaut, with one other would-be astronaut on standby and ready to take over at the last minute if need be.

Hans Matthofer naturally hopes that one of Bonn's five candidates will make the running.

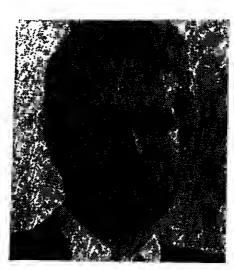

Four of them are physicists, one an

engineer — Dietmar Sengespeik, A VFW-Fokker development engineer and test pilot from Bremen. The four are Reinhard Furrer, Rainer Schwenn, Ernst Messerschmidt and Ulf

Merbold. They are currently employed at the Free University, West Berlin, the Max Planck Extra-Terrestrial Physics and

Uif Marbold, 38, married, with one daughter. He works for the Mex Pisnck institute for Metal Research in Stuttgert.

Metal Research Institutes in Garching, near Munich, and Stuttgart respectively, and the Desy particle accelerator in Hamburg.

Dr Messerschmidt (all four hold physics PhDs) was a plumber and fitter by trade before studying physics, mathematics and cybemetics.

These five men have been selected after extensive trials as the most suitable of 703 applicants. The selectors, Herr Matthöfer claimed, had not been on the lookout for superman; all they required were healthy, qualified scientists:

Thirty-five women had been among the original seven hundred applicants, but 32 of them lacked the eclentific qualifications and the remaining three failed the subsequent psychological tests.

They may or may not be consoled by the thought, voiced by Herr Matthöfer, that the tests had in any case been devised by men.

(Frankfürfer Allgemeine Zeitung für Deutschland, 23 August 1977)

na Dietmar Sangespelk, 40, single, is a development angineer and test pilot in Breman. His hobby is geology.

Rainer Schwenn, 36, married, with the children, works at the Max Planck impute for Extra Terrestial Physics is a Garching on solar research.

# Furnace in space to test

### metal alloys

Texus I, a capsule built by Emo, its Bremen epace engineering firm, it to be lauchhed to an altitude of 300 kilometres by a British Skylark 7 rocks this Novamber in Kiruna, Sweden.

The capsule will be used for hightitude experiments with metal alloys to fore returning to a location within the city limits.

Kiruna, a name indelibly associate with Swedish iron ore, is — it is only fair to add — a town with a population of a mere 30,000 spread over a fairly wide area.

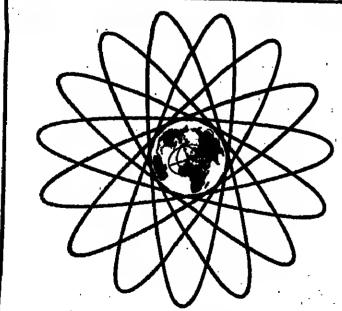

Its high-altitude rocket launching range is in regular use, and Texus, it latest customer, is an acronym standing for technological experiments at 200 gravity (in German).

The November taunching from a site near the Arctic Circle will mark the beginning of preparations for Europe's Spacelab missiona. Spacelab will k launched in the eighties by the US Space Shuttle.

The Texus project is headed by Professor Hans Ahlborn of Hamburg University, it wilt involve producing, at 200 gravity, metal alloys that cannot be manufactured on Earth.

The most important part of the 250kg (550th) payload will be a small foundry with four chambers in which

## Tin figure exhibition in Kulmbach breaks all records

Tin figure collectors from all over L the world - Brazil, Australia, and Canada - came to the small Upper Franconian town of Kulmbech recently, for the 6th International Tin Figure

Not only was there an incomparable display of simple and painted figures on view, with all kinds of eccessories and literature, but it also showed some of the main trends in this creative hobby.

tnterest la this event, which is unique in the world, is growing all the time. There were about 3,000 collectors from eighteen European and overseas countries, and the exhibition was full to bursting point.

There were so many people there over the three days that you could hardly move between the stands of the 96 exhibitors from England, Belglum, Swedan, Austria, Spain and Germany. The number of visitors and the number of exhibitors were both e record.

The most interesting trend is the increasing popularity of round tin figures of five centimetres and above. There was also a wide range of flat show case figures up to nine centimetres tall.

In the traditional 30 millimetre range there was the usual buge displey with a very high quality of engrsving ond cast-

#### **EXHIBITIONS**

## Berlin looks back with nostalgia at the Twenties

Bedin has turned back the pages of history fifty years to the nineteen twentles, its most hectic and exciting

The fifteenth European Council 'exhibition is the third which has been held in this country. (The others were "The Age of Rococo", 1958, Munich, and "Charlemagno," 1965, Aachen.)

The title of the exhibition is "Tendencies of the Twenties." More than any of the previous exhibitions, it throws light on the cultural and artistic affinities between the countries of Europe.

It is also deals with an see which is historically closer and therefore more accessible for us today.

There is no denying that Berlin dominates the exhibition; with its brillant minds, its bustle and hectic paca of life, ita intensity. But the exhibition does not confine itself to this dazzling aspect.

It also shows us the other side of the coin: economic crises, fighting in the streets, the ahattering of utopian visions. It is nostalgia, but with the dissecting

The whole town is taking part in this exhibition, the largest in Berlin since

## Furnace in space

Continuad from page 8 samples can be heated to temperatures of 1,400 degrees centigrade.

In terrestrial gravitational conditions metals have to be brought to the boil in a furnace, as it wera, whereas in outer space they can be kept in position by means of high-frequency sound waves.

Research scientists hope that alloys produced in outer space will prove pure to e degree unattainable on Earth.

A skin dayelops on the surface of liquid alloys as they cool, affecting them in a specific way. On Earth this skin oracks under gravitational pressure; in outer spece it ought to remain intacl,

One of the five experiments to be undertaken on board Texus 1 will involve an alloy of aluminium and lesd which ahould prove ideal for use in certain bearings in the motor industry.

Here on Earth, however, this alloy is Impossible to produce because liquid aluminium is so light that it just refuses to mix with the much heavier liquid

If everything goes ahead according to plan the Texus payload will flost serenely down to Esith by parachute six minutes efter take-off, while the carrier rocket will crash-land in en uninhabited part of Kiruna.

initially seven Texus payloads were to be launched et Kiruna, but it now looks like the Spacelab boffins will have to make do with four. The project is financed by the Bonn Ministry of Research and Technology. Kurt Trettner

the war. The various art collections, the galleries and the festival starting in September with its theatre, opera and con-cert performances and its literary events, they all bear the exhibition's stamp.

All the main museums in the ten member states of the European Council are contributing worka. Museums in Canada and New York also sent important works - a remarkable plece of gene-

Tha Berlin exhibition can boast a number of big names: Plcasso, Max Emst, de Chirico, Miró, Matisse, Beckmann, Dix, Grosz. The Insurance value of the paintings exhibited is 200-250 million marka - a figure likely of inspire awe among the financially-minded.

But the importance of this mammoth programme with its 2,360 works and its amous names cannot merely be expressed in figures.

Berlin claims it is "the most significant cultural event in Germany in 1977", a statement obviously intended to put the documenta exhibition in Kassel finally in its place.

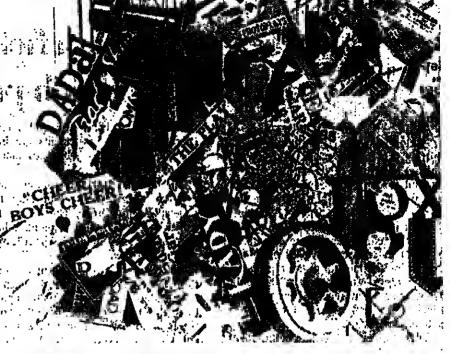

What makes this exhibition so significant is the period itself and the way it deals with this period.

We are still, to a large extent, living off the fat of this age: with its infinite range of styles, from abatrsct to realistic, its models for architecture, design, fashion, advertising, film.

This is the first time that the various movements and counter-movements of the age have all been brought together into a huge reflector which illuminales all the various tendencies.

The exhibition is divided up into four main parts: In the National Gallery, we are shown lhe way "from Constructivism to Concrete Art." The Academy of Arts presents: "Planning and Building in Europe from 1913 to 1933" and "Dada in Europe - Worka and Documents." And in the Orangerie of Charlottenburg castle: "Surrealism and New Objectivi-

The revolutionary mood of those years - throughout Europa - the hope for a new age, its partial echievement and its failure are all clearly brought out in the National Gallery's "From Constructivism to Concrete Art" - despite its rather

Grosz/Haartfiald: "Enjoying tha High Life in Universal City at noon" (1919)

The director of this part of exhibition, Dicter Honisch, presents us with a comprehensive panorama in which the interaction between theory and works of nology of the period are shown on huge

There is an excellent catalogue to the exhibition, but it is rather too bulky to carry round on the long march around the displays.

Photos of building, models, furniture and craft alongside the classical media of drawinga, paintings and sculpture illustrate the wide-ranging ambitions of the various movements which had declared war on the mere representation of "nature." In three phases we see how these movementa started, how they de-

veloped and how they finally burnt themselves out. Away from accidental appearances and intuition towards an objective, measurable vocabulary and a constructible real-

> ity - this is the dominant artistic philosophy of the years 1910-1916. The main movements of thia time are cubism and futurism - represented in different ways, but always spontaneously and personally — by Picasso and the Italian Balia, the Frenchman Delaunay and Kandinsky, e Russian who lived and worked in Germany.

Piet Mondrian and Kasimir Malewitch are the coolest and most consistent representatives of this philosophy: with sharply delineated geometrical forms. They both - independently of one another - wanted to conquer nature with pure colour.

(Photos: Kalatog)

Beckmann's "Die Nacht" (Night) (1918/1919)

In his "Suprematiat Manifesto" of 1915, Malewitch writea: "When we get out of the habit of considering paintings a representation of nature with madonart is shown. The manifestoes and chro- nss and blushing, Venus-like creatures, then we will have the pure painted pro-

The first phase of the artistic revolution takes place on canvaa, the second goes beyond it. In the years 1917 to 1922, which were dominated by tho Russian revolution, the ortistic utopia measured itself against political reality. Art tried to permeate every area of life.

This was the age symbolised by Tatlin's famous "Tower Model" for the Third International in Petrograd in 1920. The tower was never built, but it stood for a new technological age in which the painting was rejected.

El Lissitsky rejoices at the death of the painting: "The painting died with the church and the God it both proclaimed, elong with the sofa and the philistine who considered paintings the

icon of happiness." The Dutch Gruppe de Stijl of van Doesburg and Piet Mondrian, the Bauhaus in Germany, Antoine Pevsner, Naum Gebo and Tatlin in Russian all tried to achieve the desired "unity of art and life."

But this equation did not work our any better then than it does today. Their social commitment, their idee of a new kind of art for e new man, found expression more in theory - in fiery manifestoea - than in practice.

We see this in the third section of the National Gallery exhibition. The high flown tdeas are cut down to

size, in architecture and in apptied arts. They took on ahape — a shape which is still highly influential today. Here we find the rectilineal furniture, functional lamps, the first steel tube chairs by Marcel Breuer, crockery and cuttery of great purity of form.

The lesson we learn from this is: "Peinting is dead! Long live painting!"

The Pole Strzeminski with his monochrome picture structures took the step back - or forward - to the autonomous canvas, to a new, self-sufficient painting which van Doesburg himself taking up painting again, apostrophised as "concrete art." he are now and his way

If one follows the ages of art, of orts and what passed (and passes) for it in this exhibition and in Kassel, one can only conclude: Tempora non mutaniuri

(Die Welly 15 August 1977)

#### **EMPLOYMENT**

# Forecasters have a field day over school-leavers' job prospects

THE GERMAN TRIBUNE

As the summer holkleys draw to s the employers' court and will remain the blue-overailed finishing trades as a there for as long as pundits are in a whoia. hitting the labour market. With teenage jeb-seekers and their parents shepping around for apprenticeships many people sre wondering whether there are going te be eneugh apprenticeships, traineeships or just plain jebs to go round.

At this early stage there can be tittle more than conjecture based en more er less coincidental snippets of news such as the report that nearly 1,200 applications have been received by the municipsi outherities in Benn for 82 jobs fer schoel-teavers.

Lünoburg and Stade, beth country areas near Hamburg, cleim on the ether hand te be deaperately short of apprentice tradesmen end artisans, while the construction industry is advertising widety for approntices.

The Labeur Exchange at Dortmund in the Ruhr reports e perceptible decline in the number of school-teavers seeking its essistance despite an overall increasa in the number of teenagers who have actually left scheet this summer.

in Dertmund at any rate there appear te ba ten per cent more apprenticeships available than there are school-leavers te take thom up.

"Let us never, never deubt what nebedy ia sure about" seems te be the mette as ferecasters have a field day in the general etmosphere ef uncertainty as to the outcome of the forthcoming battle to find jebs for acheet-leavers.

Yet the debate seems less and less inotivated by concern about the future of acheoi-leavers themselves.

Stegans currently in currency weuld secm te indicate that the pundits are keenar te grind their various axes than join forces in the interest of the young-

The annual run on apprenticeships is being transfermed inte an ideological battlefield. Ought the State te exert greater influence en the way trade and industry run their affairs or not?

The two sides are busy manning the remparts of the positiona held prier to tast winter's Vecational Training Act. Advecates of the proposed vecational training tevy, feremost among whom are the trade untens, ere enxious te enaura that the gevernment is empewered te

They argue that this tevy wilt selve alt the problems at ene fell swoop. Arguments ef this kind are frequently advanced in the educational sector. Scepticism and objections or misgivings likawise encounter a barrage of criticism.

in the centext of current debata the gevenment has sought to convoy the impression that It has industry on the

Emptoyers promised to take en 100,000 edditional apprentices and trainees this autumn, in return for which Benn dispensed with the immediate introduction of a levy payable by empieyers whe de net train apprentices.

This, however, is a grossly eversimptified version of the true story. Employers did net fermalty undertake to provide the magic figure ef edditionat apprenticeships (how could they have done?), and the government did not have enough figures en which te base the propesed levy.

Even so, the bail is well and truly in

positien te forecast job chaes among achooi-leavers.

The national 100,000 recurs in anothor context. At the end of July the Federal Labeur Office, Nuremberg, estimated that 300,000 apprenticeships were en effer te 400,000 achool-leavers in search ef ene.

it all adds up to a convenient equstien: the empleyers have undertaken te take on an additional t00,000 apprentices, this being the number of schoolieavers whe have yot to find a job. If any scheei-icavers are ferced to sign on as unempieyed it will thus ba the empleyers whe are te blame.

Spekcsmen fer the empleyers recken current prospects are none toe bad, and certainly ne worse than a year age. ff thia is the case the situation does net, indeed, look toe bad.

This time last year it alse locked as though there were going to be 100,000 iobs too few fer scheel-leavers. Yet this year the supply is up ten per cent, whereas demand has increased by a mero cight per cent. So the situation is certainly no worse.

Estimatea ef this kind ere readily bandied about, but do the individual jeb-seeker ne good al all. Competitien is definitely teugher, as spokesmen for the employers willingly admit.

Too many youngsters are competing for apprenticeships in the top dozen favoured trades. Demand is tee high fer white-collar joba while there are not enough apprentices to ge round in constructien, mechanical engineering and

B aden-Württemberg Justice Ministry is te ge ahead with controversial

plans te train 22 youngsters whe have

failed to find an apprenticleship elsa-

where alongside convits at youth peni-

tentiaries in Adelsheim and Schwäbisch

Hall. There has, to say the least, been

mixed respense to the idea of serving an

apprenticeship "behind bars" - even

though both gaols have aurplus capacity

learning a trade in the prison worksheps

could weil prove beneficial in persuad-

ing inmates whe are inhibited and iack-

So it ieeka as though the 22 are ex-

pected to lend a hand in psychiatric and

This is a tall order and Rolf Zelter and

going te require careful aelection and briating.

ing in self-cenfidance to fellow suit.

therapeutic treatment of convicts.

ful prison inmates e good tum."

This is why the statistics inevitably convey e diatorted picture, based as they are on figures fer all trades and the entire country.

Take, fer instance, the discrepancy between civil and electrical engineering. At tha end of May, according to the Federal Labeur Office, the shertage of apprentices in civil engineering exactly corresponded to the surplus of apprentices in electrical engineering.

So the conclusion must be that this year, as in the past, net every achooi-ieaver wili be abie to taka up an apprenticeahip in the trade he er she wanta er. for that matter, in the preferred lecality.

ft is a meet question whether this has ever been the case, but the Nuremberg agency appeals te scheel-leavers te leam a trade ef some kind er other even if they draw a blank in the trade they would seenest have leamt.

tf yeu have net learnt a trade of any kind your prospects are sure te be werse, Labour Office spekesmen nete. Yeu cannot, for instance, qualify fer gevemment retraining. Seme consolationi

Realism requires that a mention be mede of the handleaps that prevent optimum utilisatien ef capacity (a problem that alse arisea at universities and institutes of higher education).

Youth empleyment regulations make it increasingly difficult for employers te gainfully empley apprentices in hetel and catering and a number of other tra-

The union waga rates fer apprentices have also been increased at such an

alarming rate that employers can hard, be everjoyed at the prospect of payle, so much for the privilege of training youngsters.

Last but not least, many school-least apply to several potential employed frequently not crying off until it is in late for the firm to find suitable alterna tive applicants.

At Hoechst, the Frankfurt chemical company, ene apprenticeship in four called eff in this way.

What, then, about the addition 100,000 jobs eliegedly needed this as tumn? At this stage it would appear a elistic to assume that roughly one flight of this number will prove an accust

According to the Federal govern ment'a vecational training report a additional 26,000 to 33,000 approach ships will be required this time round

As for the vocational training kn ought is advocates te go all out for the objective ragardless of the economic

The gevornment reckons at least ill per cent toe many apprenticeships out te be evailable. This is certainly beyou the employers' capacity at present.

Schoel-leavers themselves are not is erested in epprenticeships that are seulus to requirements. Enough to B round is all they ask for. Employers p trying hard te bridge the gap.

The iron end steel industry, for is atance, recalling Chancellor Schmidt suggestien that universities might assider werking twe shifts, has worked at the details of a two-shift training scheme in its sector.

Chambers of commerce and indus will alse be deing their best te sons youngsters, peinting cut how many it ternatives there are te the trades that happen to be pepular at present.

But measures such as these are to stricted in their scope. It is so much sier to generalise. Tima alone will to hew successfully the problems are soit Klaus-U. Ebmeyer

No. 803 - 4 September 1977

## Cologne neurologist studies the psychological effects of sterilisation on women

Women are getting tired of the Pill. Almost a third of all women between f5 and 45 in this country still take the hormone tablets daily, but many ere devoleping an aversien te this chemical manipulation of their utorus, especially if they have been taking the Pill for a number of years,

The problem with sterilisation is its finslity. ft brings with it a number ef atrains and difficulties which demand a high degree of empathy en the docter's part. The docter's respensibility is also

In view of this, it is amazing that so little research has been done into the possible consequences of sterilization on a large scale. Research has up te new been cenfined to casas where sterilisstion eperations were performed for medical or genetic ressona.

The Colegne neurolegist and psychotherapist Dr Parvin Lenhard has new published a therough analysis of this deicate subject.

She looked through the Health Office lists of patients sterilised in 1971.

in all there were 200, ef which she chose, 65 for her research three years later: the women were all middle class, aged between 25 and 45 and, with one exception, methers of twe to nine chil-

The results of this research which was carried eut ever e number of years prove the exact opposite of previous hypothe-

should not, as is eften the case, for reesona of surgical expediency, ba performed immediately after an abertion or a birth, because the weman eften regards this as e decision which has been ferced upon her.

The decter goes en te argue that a weman weuld not experience any of the peaitive effects if the eperation was performed soon aftar a birth. Har freedom to make e decision is seriously limited by the new-bem child and ahe has te give up her wish to return te werk er have mere free time.

This limitation makes it highly unlikoly sterilisation en purely medical grounds will be a succesa. This means that the attitude of many gynuecelogists, who "naturally" have nething against sterilisation if the weman's health is endangered or sha is likely to have handicapped children needs to be revised.

But a number of other assumptions about the circumstances in which sterilisations should be performed need rethinking. The "ideal" sterilisation patient is not the weman ever 35 wire already has several children and has decided in agreement with her husband, that atic wants ne more.

This has up to new been the general rule among Health Office specialists and most experts agree that this is the assumption that most gynaccologists seem to work en.

#### OUR WORLD

# Why the number of Germans emigrating each year is increasing

#### 數學也因其一個的學習的自由的學習 WELT\_SONYTAG

The first of the 38 passengers saunier L up to the Lufthansa counter at Frankfurt eirport. It is about 6 o'clock in the evening of en oppressive, rainy day.

The young men are wearing jenas and open-necked shirts, the women sandals and T-shirts. A four-year-old girl holds her doll tightly.

It would be just like any hollday flight to Teneriffa - but for the tears. And the tears are because these 38 passengers have no relurn ticket. When they take off in the 21.30 Jumbo-jet, they will be leaving for ever. They are emigrating lo Australia.

They are 38 of the 50,000 Germana who leave this country every year. About 22,000 of these go overseas -- lo Auatralia, Canada, the USA, Brazil and South Africa. Practically all of them are professionally qualified and already have e job

"For 50 to 60 per cent of the amigrants economic and professional reasons ere the main motive." according to the Central Labour Exchange (ZAV) in Frankfurt. Only about 6 per cent leave the country for political motives.

For about six years now emigration advice bureaus, job agencies and tha embassica of the countries concerned have noticed a "get up end go" mood here, an urge to get away.

The number of applications to the ZAV for work abroad rosa from 42,958 fn 1971 to 77.358 in 1976.

The Raphaelswerk, a Caritas organisa tion with 28 emigration advice bureaus all over the country, found that in the year 1975-1976 there was an almost 50 per cent Increase: from 9,025 to 13,294.

The Australian embassy even reports a trebling of the number of epplications. These enquiries and applications

come mainly from people in professions which have been very hard hit by unemployment: engineera, technicians end highly skilled industrial workers, skilled workers from the metal, electrical and chemical industries and the building in-

Over a third of all the unemployed in this country today come from these industries. 69 per cent of the 2,300 Germans who got jobs through the ZAV last year came from these branches of industry.

Günter Mey, a Cologne architect who jet to Australia, says: "1 do not see much chance of getting on here."

men, who sterted up his own business four months ago, explains: "I get up al five in the morning and work through till eight at night and all 1 earn is 4,000 marks e month. And there is not much left of that after tax. I have go no chance here."

A graduate chemiat from Göttingen: "I have got no chance of bettering myself here. Germany is too highly induatrialised and everyone works in a 20,000 per annum. Australia accepted very narrow, specialised field."

A technician from a Bremen clune-tools factory: "I don't think things will be easier over there (in Brazil) but I'll certainly be able to get on quicker and go further."

A Stuttgart chamical laboratory worker: "My son is very gifted in making things with his hands, but his school marks are bad. Can you tell me how he is going to get an apprenticeship when even Abiturienten (pupils with the equivalent of the Advanced level examination) are going for that kind of job?"

His wife adds: "Evarything is so bureaucratic here. We are treated lika Is this country now facing a new wave

of emigration, like those which took place in crisis years in the past? In the second half of the nineteenth century 100,000 to 220,000 Germans

emigrated ennually, fleeing from political troubles and economic hardship. Many did not even reach their destinations. Up to 20 par cent died of starvation or disease, sleeping on the lower deck of emigrant ships on crossings

which often lasted mouths. There were record levels of emigration in the years following the two world wars: in 1923 a total of 115.431 Germans left their homeland, and in 1949 the figure was even 270,000.

Gerhard Storbeck, 65, now director of Gennany's oldest emigration buresu hi Bremen recalls that "In those days people. would take eny kind of job they could get", but adds that "today no one is prepared to go for just any price."

The countries concerned have sinca taken measures to maka immigration more difficult. This is to protect their own economies, which have been much more affected by the world economic criais.

Unemployment is higher in the United States it is 7.7 per cent, in Canade 7.1 per cent, în Australia 4.7 per cent. (In this country it is 4.1 per cent.)

Inflation rates are also much higher than our level of 4 per cent. In the United States the rate of inflation is 6 per cent, in Australia 13.5 par cent, in Canada 7.5 per cent, in Brazil 35 per cent and in South Africa it is even 75

The United Statas has reduced the

only 52,000 of 290,000 applicants.

The only applicants to be given visas were "national need casas" i.e. those who worked in professions where labour was in short supply.

Tha situation in Canada is similar. There you even have to produce a contract before they will accept you as an immigrant. This means that of the classical emigration countries only South Africa is open to all.

The result is that would-ba emlgranta were increasingly turning towards developing countries with expanding economies - in particular Latin America, above all Brazil: the Middle East, (mainly Saudi Arabia) and African countries. But most people only stay in these countries for a ilmiled period of time.

this comment: "It is no longer the mi grants who regulate the overseas labor market, It is the overseas labour make that regulates the number of emigrant The ICEM finds jobs in Latin Amei for about 400 Germans every year.

Theo H. Bakkers, head of the Rebranch of the Intergovernmental Con-

mittee for European Migration, mis

Here, too, the labour market is lie a gulator: whereas Australia mainly need skilled craftsmen, Latin America negl sciantists and technicians and their ied nical know-how.

The result of all this is that despethe increased desire to emigrate h number of those actually emigrate from this country has remained in constant at around 50,000 per annum. Garhard Storbeck says that "qui

emigration has taken the place of the mass emigration of the past." Authory Richmond, e sociologis in the university of Toronto, predicted a of its one-time aura. long ago es 1969: "Thare will be wolk wide mobility between major towns. The : But not Max Schmeling, pre-war heais part of an axohange process in with professional career goals and person

# Schmeling, the man who fought his way to the top

Tour blood is not make-up," the lata Fritz Kortner, actor and director, once remarked to Max Schmeling "For you it is a matter of life or death." A boxer who goes down for the count may well be out for good.

"I just have to learn a thing or two. about boxing," Kortner confided, "Will you teach me. Max?" Schmeling agreed to do so.

In thosa days tles between stars of the stage end the ring were closer than they are nowadays. Boxing has lost much

yy-weight boxing champion of the world, whose memoirs have just been published by Ulistein.

Max remains a popular figure to this day, desplte the decades that have elapsed since he retired from the ring. He retains the reputation of being an ordinary man - little different from millions of fana - who fought his way to the top.

He was bom in Klein-Luckow, a country village, but went on to gain world renown and feel at his ease among the great and famous. He started his working-ilfe as en errand boy and went on to become a world champion.

His rags-to-riches lifa story is exemplary in many respects (and was certainly felt to be so by his contemporaries) in that before the war, sporting prowess was virtually the only opportunity the working man had of making a name for

And Max Schmeling can still be considered his country's most popular sporting hero.He is still streets ahead of soccer stars Fritz Walter or Franz Beckenbauar, for instance,

Max Schmeling, the son of a Hamburg seaman, joined the landed gentry only to lose everything during dthe war. When the war was over he had to start from scratch - and made a success of life yet again.

He has been happily married to film star Anny Ondra for over forty years without falling foul of the gosain columnists, and despite the political upsand-downs of the thirties and forties can also count himself lucky to have apent a mere three months in gaol. Max has nevar been particularly inte-

rested in politics and his 100 days in prison were characteristically unpolitical. He was building a house in Hamburg in the immediate post-war years and failed to apply for some permit or other, whareupon he suddenly found himself behind bars.

Politics may naver have interested John Jahr spplied for permission to publish a newspaper, again in post-war Hamburg, Max Schmeling's was the name about which the Allied press officers had misgivings.

Permission was eventually granted, bul not until Schmeling had withdrawn min. 54.12 sec.) failed to sweep the from the bld. Springer and Jahr are house- board, as already noted. hold names as prasa magnates in this

Max realised well enough that the Nazis welcomed the opportunity of using his sporting prowess as shop window-dressing. In all fairness it must be conceded that he never allowed himself to be hauled on to the Nazi bandwag-

Even so, there were times when Schmeling was made to look somewhat of a muscle-bound simpleton, as he himself admlts. Even his audience with the Pope was used by the Nazis for propaganda purposes.

Max Schmeling did his best to usa what influence he had on Hitler and Goebbels to interceda on behalf of his Jewish friends. But politics is a dangerous game and Max fell into disfavour. Goebbela professed no longer to un-

derstand the motives that lay bahind Schmaling's behaviour, "You come to the Fuehrer, you come to me, yet you still associate with Jews all the time."

There were times when Schmeling too, no longer understood what was going on, or so he says in his memoirs. On 19 August 1936 he made what can only be described as a comeback for a boxer in his mid-thirties, knocking out Joe Louis in the twelfth round to regain his world crown.

Back home ha waa hailed as e model of German manhood, yet when he raised his hand it was the boxer's clenched fist he brandished, not the outstretched arm of the Nazi salute.

On 22 june 1938 he returned to New York, where Louis was again the chal-lenger. This time, to his utter bewilderment, ha was derided as Schmeling the Nazi superman, whereas Joe Louis was suddenly a symbol of freedom and equality of peoples and races against the Nazi threat.
Louis sent Schmeling down for the

count in the first round and the two men are good friends to this day.

Max Schmeling's memoirs are first and

foremost a reconstruction of his boxing career, his good days and his bad days, his first world championship win in 1930, his tactics and way of life, his knockout blows and ring sensa. But the Zeitgeist, the spirit of the age,

is by no means conspicuous by its absence. Schmeling the champlon moved up in the world. He was painted by George Grosz and sculpted by Rudolf

Max nonetheiess realised that, initially at least, he owed his popularity to his boxing and not to his personality. He resisted the tempation to try his luck as a film star or political hanger-on. Yet Schmeling the boxer remained in demand as a symbol of manhood.

When war was declared Max Schmeling became a paratrooper. He stood no chance of being excused ective service even if he had so wanted, since he was on bad terns with Sportfuehrer Hans von Tschammer und Osten, the man who organized the Berlin Olympics. He served in East Prussia and Greece

and whan the war was over, penniless and no chicken at age 42, he clambered back into the ring to earn the cash with which to start afresh. With the proceeds, a purse of DM Mex Schmeling

(Photo: Sven Simon)

Hollenstedt on the northern peripher of the Lüneburg Heath.

He and his wife still live there, but Schmeling works in Hamburg, where an American boxing official fixed him up with a Coca Cole franchise. So all is well that ends well.

Yet Max Schmeling, it is as well to remember is the scion of en ege in which people believed in the noble art. A world champion boxer "Gentleman Jim" Corbett declered in the German Press that e batter boxer la a better man and citizen.

Such cleurs are, of course, nonsensical. but Max Schmeling would nonetheless seem to be the exception who proves the rule. Manfred Lehnen

(Hannovarsche Aligemeine, 20 August 1977)

Teter Nocke from Wuppertal is the most successful European championship swimmer of ail time. At Jönköping, Sweden, he edded four gold medala to the five he won in Vienna three years ago.

He only failed to sweep the board as he had done at Vlenna bacause the highly fancled Soviet 4x200 metres relay team outcrawled this country into second place on the final day.

The Soviet quartet came home in 7 min. 28.21 sec. as against this country's 7 min. 33.28 sec. Still, it was yet another medal, silver this time, for Peter Nocka. who accounted for the lion's share of his team's medal haul.

At Jönköping this country did better than anticipated, winning seven gold, two ailver and four bronze madals, faring even better than at Vienna, where the score had been six gold, three silver and three bronze.

This country's swimmers were et their best in the relay events, the men setting un a new European record for the 4x100 metres wawf in 3 min. 26.57 sec. In e Max, but when he, Axel Springer and time of 3 min. 48.73 sec. the team also defended its 4x100 metres medley title.

In the 4x200 metres crawl Frank Wennmann of Easen (1 min, 53.06 sec.), 51.89 sec.) Peter Knust of Wolfsburg (1 min. 54.21 sec.) and Peter Nocke (1

Swimmer Peter Nocke scoops up four more golds

40,000, he bought e few acrea of land in

Peter Nocke (Photol dps) Nocke, Viadimir Bure of the Soviet

Union and Marcello Gourducci of Italy. "I am far more delighted at wing hold names as prasa magnates in this country; Max Schmeling too is a successful businessman, but in an entirely different line of business.

His career in publishing was presumably nipped in the bud because Schmeling the boxer was invited on more than one occasion to the Reich Chancellery, but the subjects he discussed with Nazi officials were usually innocuous.

Both Nocke and Steinbach had swum all these fineds than I was the final same and same and steinbach had swum all these fineds than I was the final same and same and seem of steinbach had swum and same and same and same and swum the distance in a brilliant 51.51 seconds in his final leg a good four metres behind and came a disappointing fourth behind treat.

"I am done for. I all but drowned." he commented after the race. Oddly enough. Kleua Steinbach, who has put in little training this season, turned out to have more stamine.

After disappointing himself and other members of the team in his individual avent he went on to swim his leg of the relay in a brilliant time of 1 min. 51.89 sec. But this valiant effort failed to affect the outcome.

Of the thirteen medals won at Jönköning e round dozen were won by the men, who the most successful team et the championships, nothing up more medals than even the Soviet Union.

The women just managed to scrape home with a solitary bronze medal in the last event but one, the 4x100 metres medley swum by Heike John of Weisweiler, Dagmar Rehak of Saarbrücken, Karin Seick of Winsen and Jutta Neeuw

Their time of 4 min. 19.05 aec. was a new national record and a slight consolation in view of the fact that by this stage the women had virtually been written off as far as medal prospects go.

The sensation et Jönköping as far as this country is concerned was unquestionably Gerald Mörken, the seventeeear-old Dortmund boy who was expect ed to do well in the breast atroke, but excelled himself in the 100 metres with a new world record time of 1 min, 2.86

The only other world record-breakers al Jonkophing were this GDR girls Petra Thumer and Ulrike Tabber, with 4 min. 8.91 sec, in the 400 metres gravil and 2 min. 15.95 sec. in the 200 metres med-ley respectively.

All told, this country's team set up seven new European and eleven national records, the part is the state of the restriction.

(Hannoversche Allgemeine, 22 August 1977)

Yet it is not economic hardship which causes so many of these workers to seek their fortunes abroad, it is cool calculation. They reckon that their chances of getting on are belter abroad.
